ServoMaster: Metadata: controller/protocol/USB

Table of contents

1. Definition

`controller/protocol/USB` *feature* returns `true` if the hardware supports USB protocol.

Keep in mind that there are controllers that support more than one protocol, like AdvancedServo and Pololu 16-Servo, which will have both `controller/protocol/serial` and `controller/protocol/USB` features set to `true`.

This feature has no relation to the way the hardware is currently connected.
